

Solution Brief

Continuous Compliance

Make compliance your default state

Build and maintain an always-on compliance machinery that keeps pace with evolving risks and threats.

Reactive compliance disrupts day-to-day and creates audit obstacles

To treat compliance as an 'audit emergency' is naive at best and dangerous at its worst.

Naive, because reactionary measures to achieve compliance and complete audit requirements are prone to errors and leave a lot to chance. Last-minute surprises, often arising from unforeseen exceptions or special cases, not only hinder progress but also sow chaos.

As your organization scales, new risks emerge, presenting additional challenges. Indeed, beyond the immediate threat of audit obstacles, treating compliance as an occasional, once-in-a-while activity fundamentally undermines the credibility of your claims and aspirations to uphold a security-first culture.

Navigating this morass becomes easier with technology that brings clarity, organizes efforts, and adds momentum to compliance and audit goals.

Damage from cyberattacks will amount to about \$10.5 trillion annually by 2025

McKinsey & Company

43% of executives believe that their firms follow best practices for cybersecurity, but only about 24% of firms meet that bar

Bain & Company

95%

of global businesses have established or are actively trying to build a 'culture of compliance.'

Accenture

360° view and 24X7 monitoring make compliance smooth sailing

Audit stress often stems from treating compliance as a concentrated, last-minute 'project.'

The solution lies in building compliance consciousness by creating an organized, connected, and always-on compliance system that transforms compliance from a point-in-time project into an ongoing, integrated process woven into day-to-day operations.

Untangling compliance and threading requirements into the day-to-day prevents process disruptions, keeps focus intact, and ensures a more balanced relationship between effort and reward. In effect, continuous compliance monitoring alleviates the operational burden of tracking controls regularly and collecting evidence for audit review.

To accomplish this, it's essential to streamline security methods and intensify focus on control management.

In practice, you require a smart system that autonomously monitors controls, identifies anomalies, initiates remediation automatically, and collects high-fidelity audit evidence. This ensures that you are consistently meeting compliance standards and have empirical proof of such a practice. You stay well-prepared, never get caught off guard, and approach audits with unwavering confidence.

Why you should consider continuous compliance with sprinto

Sprinto helps you stop firefighting. Compliance moves from stressfully reactive to consciously responsive because:

- Automated control validation, evidence collection, and verification slash time to audit readiness by more than half.
- Compliance is integrated into daily processes minimizing business growth vs infosec tradeoffs.
- Visibility into controls and control status enables a faster, fully coordinated response to flare-ups.

Additionally, Sprinto supports agile decision-making and compliance maturity because:

- Dashboards lend visibility that allows you to report on risks, controls, and overall compliance status in real time.
- IT due diligence is carried out with speed and accuracy supported by up-to-date control information.

3 must-haves for continuous compliance

A smart system that connects all the dots	<ul style="list-style-type: none">✔ An integrations-first approach ensures you can build a complete, cohesive picture of your operating environment and risk exposure without missing anything. Responsive integrations also support efficient automation, foster improved collaboration, and enable accurate task tracking across the board.
Monitoring criteria that ensure nothing is missed	<ul style="list-style-type: none">✔ A platform that serves as a body of compliance knowledge and also as a means of interacting with that knowledge drives exponential operational efficiencies. When supported by a toolkit that includes a built-in controls library and pre-mapped control tests, the knowledge-based platform ensures that your compliance machinery is always operating along the right axes.
Workflows that keep compliance goals on track	<ul style="list-style-type: none">✔ Clear, integrated workflows connect tasks with specific roles to drive compliance forward. These workflows, supported by timely, context-rich alerts, add momentum to compliance management, ensuring you avoid oversights and arrive fully prepared for audits, completing all necessary actions within the set SLAs.

Sprinto: Your compliance command center

Ensure ongoing compliance with security standards that matter

Sprinto de-risks audits by helping you extract, embed, and ensure the full value of any security framework. By seamlessly integrating compliance into operations and maintaining constant oversight, Sprinto effectively enhances visibility, predictability, and control in overall compliance management and audits. It ensures a structured approach to program maintenance, covers the entire compliance scope, produces a high-fidelity audit trail, and minimizes last-minute surprises and back-and-forth communication.

Ultimately, you approach audits with confidence, armed with context-rich and trail-backed evidence samples, and a general readiness to take auditor questions head-on.

How Sprinto supports continuous compliance monitoring

Native support for 200+ connectors

Powerful integrations that connect the dots

Sprinto connects horizontally with everything and everyone in an organization's universe to give infosec teams a 360-degree view of its assets, risks, and controls. With over 200 native integrations and responsive Dev APIs, Sprinto precisely inventories assets, maps controls, tracks checks, and gathers up-to-date, error-free evidence for successful audits.

Upto 99% automation

Intelligent automation that does the heavy lifting

Supported by integrations, connectors, and embedded compliance intelligence, Sprinto automatically tests controls against your selected security framework's requirements. It monitors control health, initiates remediation, and gathers compliance evidence at your preferred frequency without interrupting teams and disrupting productivity.

Responsive automated workflows

Workflows that infosec teams can count on

Sprinto delivers context-rich alerts and notifications based on rules defined and set within the platform, ensuring checks and remediation adhere to SLA timelines. These alerts not only pinpoint the issue's location but also convey its severity and prioritization details, resulting in a clear, time-bound workflow for the control's owner.

Real-time control health tracking

A dashboard that gives you the big picture

Continuous compliance can happen organically, without the infosec team breaking a sweat, with Sprinto's control dashboard – switch between enterprise-level view and entity-level view easily to assess, analyze, and act with urgency and as per risk levels and compliance requirements.

Custom capabilities

Flexibility to implement own frameworks, controls, and checks

Use Sprinto to track in-house security programs in real time. Sprinto can enforce custom controls and automatically conduct checks based on rules you define for these controls, ensuring sweeping automation coverage and operational efficiencies thereof.

“Automation helps, in terms of linking all the pieces together. Along with APIs, Sprinto paints a clear picture of where you are and where you need to go.”

Anil Varma CISO at Officebeacon

About Sprinto

Thousands of ambitious tech companies trust Sprinto to streamline their GRC program, automate management, and maintain security best practices. Sprinto supports over 20 security standards, including SOC 2, ISO 27001, GDPR, HIPAA, and PCI-DSS, as well as custom frameworks. Featuring a smart, adaptive and scalable architecture, Sprinto ensures security best practices without getting in the way of your growth ambitions.
